

MAPLE COURT VS COMPOSITE COURT

Maple Courts are traditional basketball courts made from dense maple wood, offering excellent durability, consistent ball bounce, and a classic look. They're prized for their shock absorption and reduced glare, making them ideal for professional play.

Composite Courts are engineered surfaces combining various materials like wood fibers and polymers. They mimic the feel of hardwood while providing greater resistance to moisture and wear. Composite courts are cost-effective, easy to maintain, and suitable for multiple sports.

COURT FEATURES	MAPLE COURT	COMPOSITE COURT
Square Footage	60,000 sq ft.	80,000 sq ft.
Assembly Time	3 Days	1 ½ Days
Transition Height from Matrix	1 in	1/8 in
Storage Conditions	Climate-Controlled	Non-Climate-Controlled
